

Problems Viewing WMV Files?

The WMV files contained within the ITP Group website are best viewed using Microsoft Windows Media Player, along with a 512 Kbit broadband connection. If you are experiencing problems viewing the files once download is complete, try the following:

1. Close down all applications
2. Open Microsoft Windows Media Player
3. Go to 'Help'
4. Go to 'Check For Player Updates...'
5. Follow onscreen instructions to install the latest version of Microsoft Windows Media Player, which is free to all Microsoft Windows users.
